

GEOMETRICAL MECHANICS

Part I

Lectures by Saunders MacLane

Department of Mathematics
The University of Chicago

Winter Quarter 1968

These Lecture Notes were prepared with assistance by
a grant from the Office of Naval Research

1968 by Saunders MacLane

Notes by Raphael Zahler

Assisted by G. T. Angwin
W. M. Corvette
P. H. Palmquist
M. K. Smith

TABLE OF CONTENTS

| | |
|-------------------------------------------------------|----|
| INTRODUCTION | 1 |
| § 1 Modules (including vector spaces) | 4 |
| § 2 Euclidean vector spaces | 8 |
| CHAPTER I. LOCAL MECHANICS | 12 |
| § 1 Functions | 12 |
| § 2 Paths, Functions and Tangent Spaces | 14 |
| § 3 Tangent Bundles | 22 |
| § 4 Vector Bundles | 24 |
| § 5 Lagrange's Equations. | 31 |
| § 6 Lifting Paths | 34 |
| § 7 Hamilton's Principle | 41 |
| § 8 Bilinear and Quadratic Forms | 45 |
| § 9 The Legendre Transformation | 48 |
| CHAPTER II. TENSORS AND EXTERIOR FORMS. | 56 |
| § 10 Vector Fields | 56 |
| § 11 The Tensor Product. | 59 |
| § 12 Tensor Algebras and Graded Algebras | 66 |
| § 13 Exterior Algebras | 68 |
| § 14 Alternating Tensors | 74 |
| § 15 Local Manifolds: Invariant Description | 76 |
| § 16 The Exterior Bundle. | 78 |
| CHAPTER III. HAMILTONIAN MECHANICS | 83 |
| § 17 Calculus of Variations. | 84 |
| § 18 Application; The harmonic oscillator. | 87 |
| § 19 Canonical Transformations | 90 |
| § 20 Symplectic Spaces | 94 |
| § 21 Hamilton's Equations | 96 |
| § 22 Symplectic Manifolds | 98 |

| | | |
|------|-------------------------------------------------------------|-----|
| § 23 | The Poincaré Lemma | 100 |
| § 24 | The Lie Derivative | 105 |
| § 25 | Transportation along Trajectories. | 108 |
| § 26 | Generating Functions for Canonical Transformations. | 114 |
| § 27 | The Top. | 119 |
| § 28 | The Darboux Theorem | 124 |
